Dividing Fractions

To revise our work on dividing fractions, here is a link to sing along to!

Dividing Fractions

$$\frac{2}{5} \div \frac{2}{3} \quad\longrightarrow\quad \frac{2}{5} \times \frac{3}{2}$$

1. Keep the first fraction the SAME (KEEP)
2. CHANGE the ÷ to ×
3. FLIP the second fraction so the numbers are the other way round
4. Now you can multiply the numerators and then you can multiply the denominators.

$$\frac{2}{5} \times \frac{3}{2} = \frac{6}{10}$$
