

# Plant Research Project

Plants are amazing things and they grow in every part of our planet, even in Antarctica! They can be tiny lichens or massive redwood trees that can live for hundreds of years.

Choose a type of plant or a place plants live, and use your computer skills to research your chosen topic. Then make an A4 information poster, with lots of colourful pictures to illustrate the fascinating facts! Make sure the pictures match what you are telling people, and that they have a caption. Here are some ideas.

You could research:

- Desert plants
- Ocean plants
- Smelly plants
- Biggest flowers
- Biggest plants
- Smallest plants
- Trees
- Poisonous plants
- Carnivorous plants
- Rainforest plants
- Ancient plants (plants that were alive when the dinosaurs were around)
- Oldest plants

I'm sure you can think of some great topics too! Send your posters in to [year3@nettleham.lincs.sch.uk](mailto:year3@nettleham.lincs.sch.uk) We'd love to see them and they'll look great in the gallery!
