

It is very easy to make coloured salt for your class to use.

Salt dyeing does not take long and needs to be done a day or even two days before you teach this lesson.

What you will need:

- 6 x 750g -1.5kg bags of table salt
(depending on how much salt is required)
- 6 bottles of different coloured paint
- 6 large mixing bowls
- A mixing spoon

Follow these steps to make coloured salt

Pour salt into small plastic bowls. You can make as many bowls as you would like. Only fill the bowls half way with salt.

Squirt different coloured paint into the salt and use a mixing spoon to mix it in. You may need to add more paint as you go.

Let the bowls of salt dry for a day or two before transferring them to smaller bowls and allowing your class to use them.
