

# PERIMETER

To calculate the perimeter of any shape, you must include **the length of ALL THE SIDES**.

If the side is not labelled with a length, it doesn't mean you can ignore it.

Please look at the other sides of the shape - these will tell you the length of those sides that have no length labelled.

 <p>Perimeter : <math>12 + 9 + 10 + 5 = 36\text{cm}</math></p>	 <p>Perimeter : <math>13 + 4 + 3 + 7 + 4 + 3 + 13 + 4 + 3 + 7 + 4 + 3 = 68\text{cm}</math></p>
 <p>Perimeter : <math>20 \times 5 = 100\text{km}</math></p>	 <p>Perimeter : <math>45 \times 4 = 180\text{mm}</math></p>
 <p>Perimeter : <math>9 + 8 + 9 + 8 = 34\text{km}</math></p>	 <p>Perimeter : <math>22 \times 4 = 88\text{mm}</math></p>
 <p>Perimeter : <math>11 \times 10 = 110\text{mm}</math></p>	 <p>Perimeter : <math>5 + 9 + 5 + 5 + 9 + 5 = 38\text{cm}</math></p>
